Online Cake Ordering System

Aim

To design and develop an online cake ordering website that lets customers browse, filter and order cakes with customization and delivery tracking, and lets the admin manage cake products, orders and shipping status.

Algorithm

1. Start the application; the customer registers and logs in.
2. Customer searches cakes and filters by category, sub-category and price range, then views the cake list and description.
3. Customer chooses size and message and adds the cake to the cart.
4. Customer adds or updates the shipping address and places the order.
5. Customer pays through the payment gateway; the order is saved and a confirmation email is sent.
6. Customer opens My Order to view orders and track the shipping status.
7. Admin logs in, posts cake details and description and uploads images.
8. Admin manages orders by updating order status and shipping location, then logs out.

Result

The cake ordering website was developed and tested successfully. Customers could search, filter, order and track cakes, and the admin could manage products, orders and shipping status.
